INTRODUCTION

The information included in this Annual Planning Information Report (API), is developed to assist the Job Service and Employment and Training planners in developing employment programs and job training plans for fiscal year 1983. Other socio-economic planners and data users should also find the report of value. The API includes information on, and analysis of, (1) statewide and area population, (2) employment and unemployment trends, (3) related economic developments, and (4) occupational and industrial trends. An appendix is also included which contains 1980 census information on the population and housing characteristics of Montana and each county within Montana.

If the overall purpose of employment and training programs is to be met, comprehensive data is needed on the population and labor force characteristics of the relevant areas. As stated in the regulations, the programs goals are: (1) to provide job training and employment opportunities for economically disadvantaged, unemployed, and underemployed persons, and (2) to assure that training and other services lead to maximum employment opportunities and enhance self-sufficiency. This is to be accomplished by establishing a flexible and decentralized system of federal, state, and local programs.

HIGHLIGHTS

Highlighting this year's report for fiscal year 1983 are the effects of the 1981-1982 economic decline and changes in the characteristics of Montana's female labor force since 1970. From 1970 to 1983 the female labor force should expand by 73.9% compared to 33.9% for males, while the 1983 female unemployment rate should be 8.6% compared to the male rate of 9.5%. Women will comprise 41.6% of the Montana labor force in 1983 - compared to 35% in 1970.

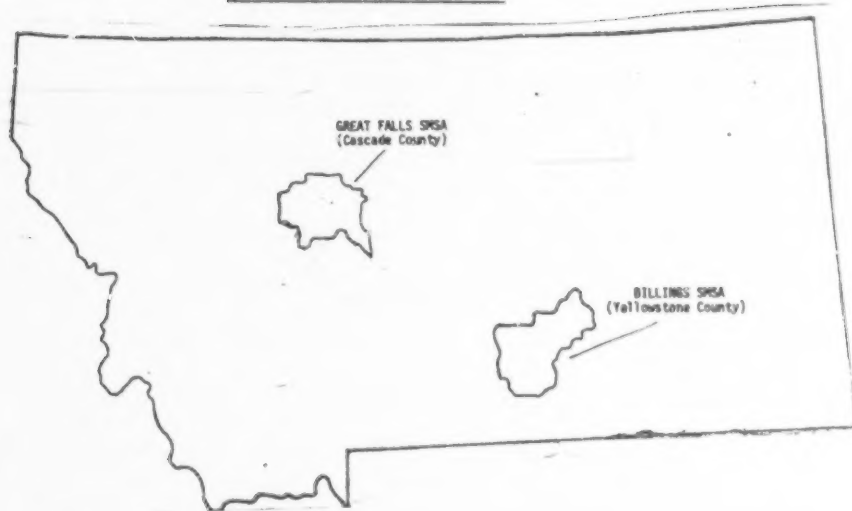

Significant changes are also becoming evident in the structure of Montana's population and are highlighted in this report. The more profound changes are the increases in the number of persons between 20 and 40 years of age and those 60 to 75 years of age. The age distribution of Montana's population in 1983 - compared to 1970 - will be considerably different and the implications will affect business and social services.

Changes in Montana's economy during 1980-1981 will continue to be evident into 1982-1983. The closing of a copper smelting operation and reduction in mining in western Montana resulted in the loss of over 1,500 jobs. Western Montana also struggled through another year of slack demand for lumber products. Eastern Montana saw unemployment rates rise due to decreasing activity in energy development--yet still remain low in relation to western Montana.

Inflation cooled in 1982 as the Consumer Price Index (CPI-U)

increased by only 6.5% from July 1981 to July 1982. The unemployment rate stubbornly remained around 9.0% with projections to 1983 in the same range. The worst appears to be over but the climb back is expected to be long and slow.

DESCRIPTION OF AREA

MONTANA

Montana, with an area of over 147,000 square miles, ranks fourth in size of the 50 states. Total population of the state is forecast to be 814,907 in fiscal year 1983; currently the state ranks 43rd in total population. Economic activities and potential development are affected by the various land forms, climate, soils, and vegetation occurring throughout the state.

Basically, economic characteristics for the state can be generalized by considering the two congressional districts of the state, Eastern and Western. The open grass plains of northern and eastern Montana support extensive grain fields and provide grazing for large herds of beef cattle. In recent years the exploration and development of fossil fuels has been an increasing activity and has, until recently, softened the impact of the current economic downturn. In the western part of the state the major economic activities are metals mining, lumber and wood product manufacturing, and tourism. This part of the state is covered by the peaks and valleys of the Rocky Mountains.

BILLINGS SMSA

Yellowstone County is designated as the Billings Standard Metropolitan Statistical Area (SMSA) and population is forecast to be 114,023 in fiscal year 1983. The largest city in Montana, Billings, is located in the SMSA in the south central portion of the state. Billings is one of the more rapidly growing cities in the state. Energy-related development in Eastern Montana has had a positive impact on wholesale and retail trade in Billings and new projects will continue this trend. The SMSA also functions as a center for oil refining, food processing (sugar beets and meat), and various other manufacturing industries.

GREAT FALLS SMSA

Cascade County is designated as the Great Falls SMSA and population is forecast to be 76,727 in fiscal year 1983. Great Falls is located on the western edge of Montana's high plains country. Great Falls SMSA has shown a slight decrease in population since 1970. The area functions as a regional trade center and also as the base for a large federal employee population.

ECONOMIC DEVELOPMENTS AND OUTLOOK

NATIONWIDE

The United States economy in 1980 was characterized by a surprisingly robust demand for goods and services straining against high interest rates, a rising-and stubborn-inflation rate, and continued vulnerability to the increased price of oil. Growth in the economy-as measured by changes in real GNP-experienced a sharp decline in the second quarter of 1980; this coming after a five year period of recovery and expansion after the 1974-1975 downturn. Interest rates experienced considerable swings throughout the year due to a restrictive monetary policy and the imposition of credit controls in the second half of the year. High interest rates, which have typically slowed the economy, had not brought spending down to the extent predicted during 1980.

The oil price shock of 1979 finally rippled into the economy in 1980. The Consumer Price Index (CPI) reflected these price increases and by December 1980 had risen 12.4% from December 1979. The national unemployment rate followed the volatility of the demand for goods and services. Employment peaked at 97.8 million in February 1980 but fell to 96.8 million by June. Over the same period, the unemployment rate went from 6.2% to 7.6%. Through 1981, modest increases in employment were matched by increases in the labor force and the unemployment rate remained between 7.4% and 7.6%. The impact of the recession hit during 1982. National unemployment rates topped 9.0% with a projected 1982 annual average of 9.8%.

NATIONWIDE cont.

The current downturn in the economy has been skewed in it's impact on industries and regions. Autos, steel, tires, and construction have been especially hard hit. Computers, information processing, and aircraft manufacturing industries have fared somewhat better. Oil drilling and exploration slowed considerably in early 1982. Industries that supply goods and services to the general public have been hurt by the high interest rates. As interest rates decrease these industries should start to recover.

The housing industry was expected to collapse in 1980 because of high mortgage rates, but activity stubbornly remained at a level of 1.5 million starts. However, high interest rates prevailed through 1981 and into 1982 causing the housing industry to drop into a severe slump.

The dilemmas that home builders face are high interest rates and straining sources of money available for home loans. In 1982 the State of Montana Housing Board has made \$48.1 million available at 12.5% for the purchase of existing and new homes. Also, several bills have been introduced in Congress to aid the housing construction business. The decline in the number of exhibitors at the state home builders convention is a sign of these painful times. There were only 28 exhibits, compared to 50 to 60 at the convention one year ago. One of the home building material suppliers noted that he had about 4,000 clients a few years ago and now he figures only about 1,200 clients are purchasing his supplies. Also, many suppliers have adapted to offer equipment for the do-it-yourselfer, as more and more people are doing their own remodeling and building.

NATIONWIDE cont.

Another view of the home construction hardship can be seen in the number of building permits. The total new home permits issued in Billings, Missoula, and Great Falls during 1980 amounted to 692 which compares to 364 in 1981; for a 47 percent decline in one year. Recovery isn't expected until interest rates decline and remain down for a period of time.

The consumer price index (CPI-U) has dropped to 6.5% (July 1982) compared to 10.4% in 1981 and 13.5% in 1980. Interest rates have declined somewhat. Unemployment will remain high through 1982, averaging 9.8%, and dropping to 9.0% by year end 1983.

The economy should begin a slow growth as the recession bottoms out. However, the consumer and the business community are cautious about expending scarce resources at the first sign of an economic upturn. As confidence returns that recovery is truly underway the capital and consumer spending will accelerate the recovery and lower the unemployment rate.

MONTANA

Just as different regions and industries are affected by a slowdown in America's economy, so are different regions and industries in Montana affected. The implications of any change in the national economy are not distributed evenly across the state.

Often in past recessions, Montana's economy has been able to keep ahead

MONTANA cont.

of a national slowdown. This time around, Montana is firmly in the midst of the downward tilt of the nation's business cycle. A more pronounced disposition of Montana's economy can be realized from the March 1982 unemployment rate for Montana's two congressional districts: The western district recorded 13.4% and the eastern district was 7.3%. State-wide unemployment rates for the first quarter 1982 averaged 10.3%, which is higher than any 1st quarter since 1961 at 10.5%.

In the past few years, the eastern half of Montana has been better able to weather a decline in national economic activity than the western half of the state. In 1980, the eastern half of the state experienced lower rates of unemployment than the western half. (See Tables 1 and 2). This trend has continued through 1981 and through the worst of the recession in 1982.

The economy of eastern Montana has always centered on the agricultural industry. In the past few years, the mining of fossil fuels has become a more prominent industry. Major new finds of gas and oil deposits have been made, and with the decontrol of oil prices, drilling activity has increased. Until early 1982, oil and gas activity remained at a high level in eastern Montana-despite a nationwide economic decline. However, with the decrease in oil prices, oil and gas employment began declining in March of 1982.

The effects of high interest rates for home mortgages painted a dismal picture for construction and Montana's lumber industry. The lumber

MONTANA cont.

industry in Montana has been depressed since 1980. 1980 began with hundreds of mill workers laid off in the state--mostly in the western half of the state. Production has yet to return to normal and until it does high unemployment rates will persist in the Missoula and Kalispell areas. Statewide employment in lumber and wood products manufacturing averaged 9235 in 1980, and 9057 in 1981. Employment dipped as low as 7277 in March, 1982 and had only risen to 7996 by July 1982, a drop of 1941 from July 1981.

Copper mining and smelting operations have historically provided hundreds of jobs for workers in western Montana. However, in 1980 a smelter was closed in Anaconda resulting in the loss of over 1000 jobs; and in Great Falls, a copper refinery was closed, affecting about 500 workers. The copper mine in Butte decreased its workforce by 25% in 1982. Along with the personnel reduction of 270, the company announced that they will no longer use the main Berkley Pit and underground mines, and will allow them to be flooded over the next twenty years.

Montana's economy will follow the nation's in the next few years the same as it has since 1980. Energy related development will continue to be a help to communities throughout eastern Montana, but not the boom it was in the past. Oil field activity is historically volatile and could return quickly to pre-1982 levels if the cost of capital decreases and the price of oil increases.

Agriculture should remain stable, employment in metals mining will be

MONTANA cont.

drastically lower than in the 1970's, and the lumber industry will continue to wait for interest rates to drop and housing starts to rise. Montana's unemployment rate is expected to rise to 9.0% in 1982 and 9.1% in 1983. Montana's unemployment rate is and has been for the last 10 years-below the national rate. Montana's unemployment rate disguises the fact, however, of vastly different employment situations from the eastern to the western sides of the state.

TABLE I

1980 Average Unemployment Rates By LMA

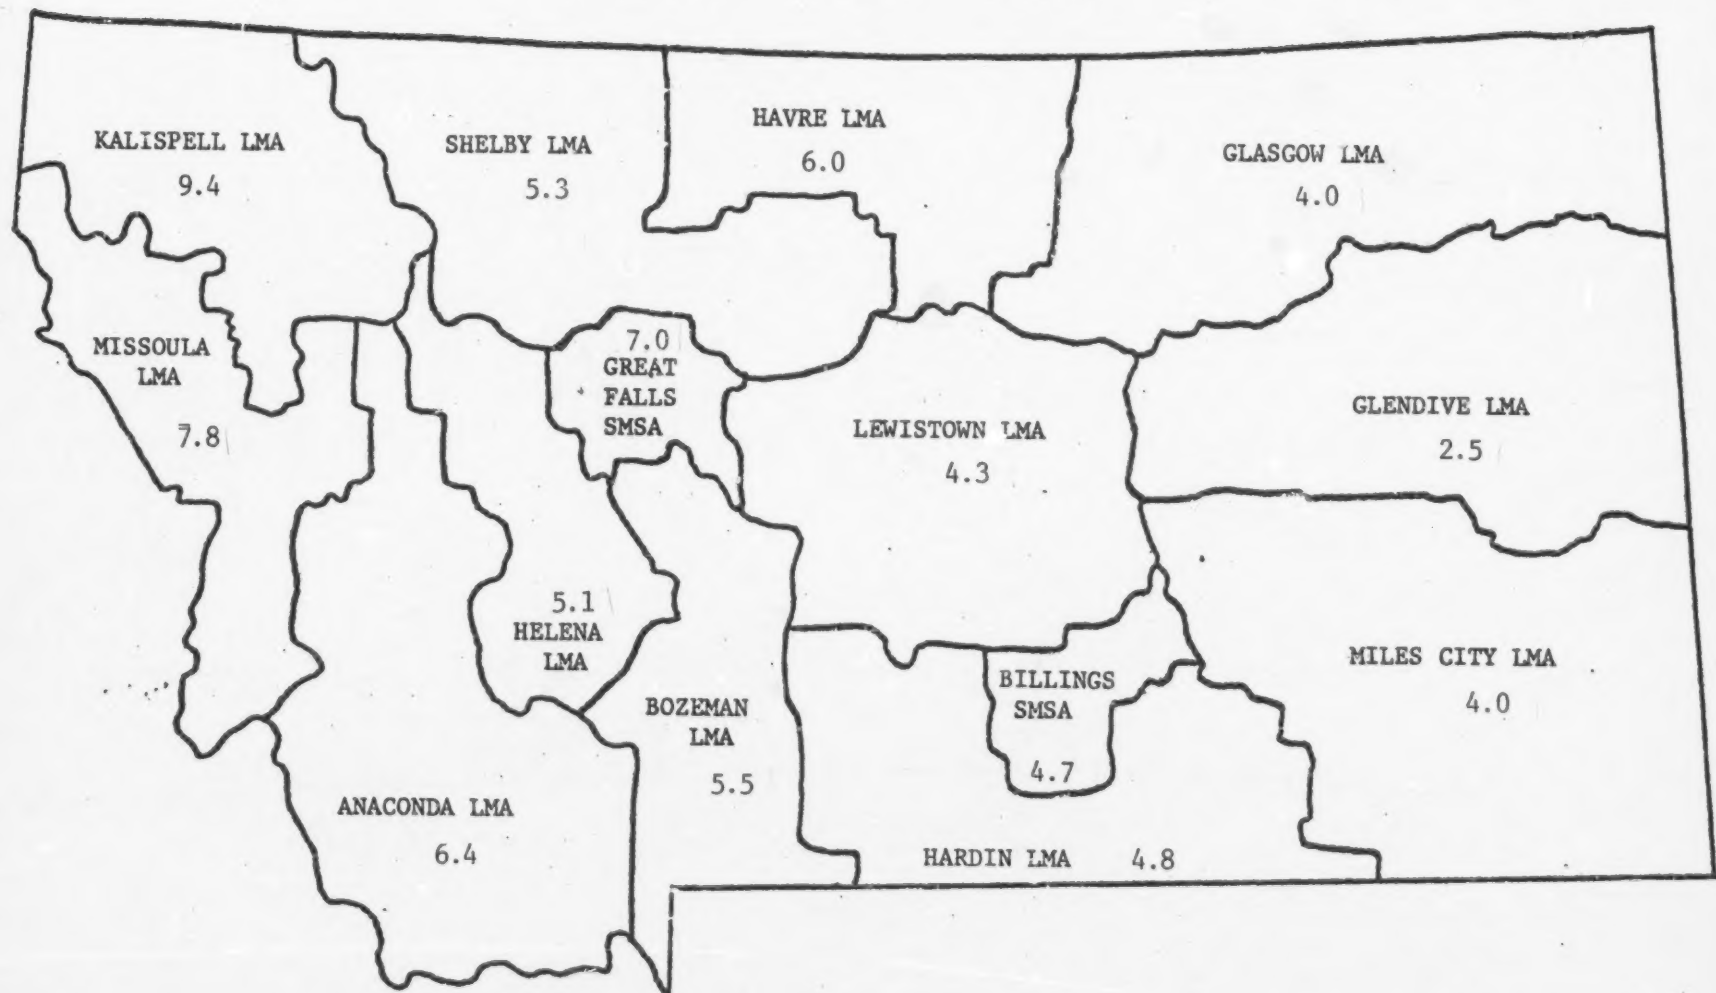

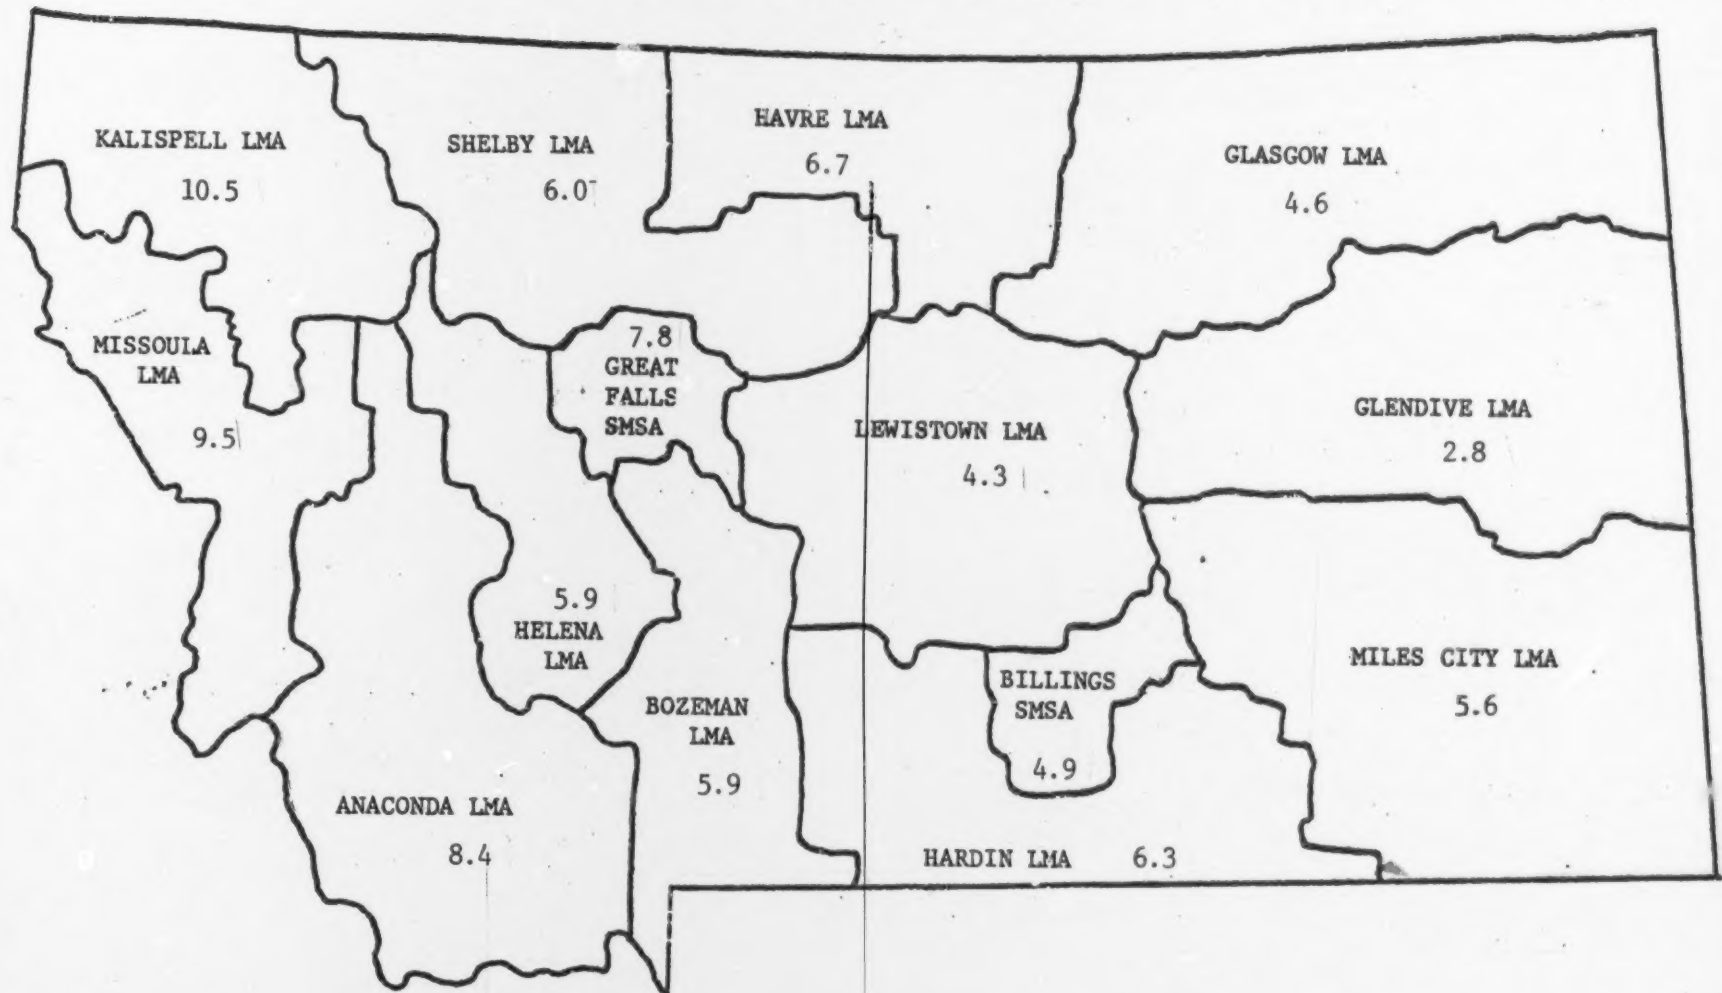

TABLE II

1981 Average Unemployment Rates By LMA

POPULATION AND LABOR FORCE CHARACTERISTICS AND TRENDS

POPULATION

Montana's population is projected to be 814,907 in fiscal year 1983, 17.4% higher than 1970. This rate of growth is exceeded in the Billings SMSA (30.5%). The Great Falls SMSA is expected to show a decrease of 6.2% from 1970-1983. Great Falls had a 1.4% decrease from 1970-1980. Therefore, the largest portion of this decrease is projected between 1980 and 1983. Tables 7-14 contain the specific data on population for the state, the Billings SMSA, and the Great Falls SMSA. The appendix tables show selected demographic data by county from the 1980 census.

Population data from the 1980 census has been included in this API as much as possible. It is hoped that this data will be beneficial to all planners. Changes in population from one census to another can be helpful in spotting trends and particular groups in need of employment and training programs.

The 1970 to 1980 span saw many changes in Montana's population. The male population increased by 13.1% with the 25-34 age group showing the largest increase (69.8%). The female population increased by 13.4% with the 25-34 group growing by 63.0%. The white population increased by 11.6% while the non-white population grew by 48.4%. Yet the non-white proportion of the total population only increased from 4.5% to 5.9%.

The most rapidly expanding part of Montana's population will be in the groups 20 to 40 years old and 60 to 75 years old. Lower rates of growth--even negative rates--are typical of those age cohorts under age 20 and between

age 40 and 60. This profoundly changing population structure is the realization of the fact that the "baby boom" generation (those persons born between 1946 and 1960) is getting older. The structure of our population in 1983 will then be one with a lower percentage of youth, a 'crowding' of persons into the ages of 25 to 34, and a growing number of those over age 60. Tables 7, 9, 11, and 13 give more detailed comparisons and projections for 1983.

Table 8 examines changes in Montana's population from in/out migration, births, and deaths from 1930 to 1980. Any changes in total population are the net result of these four factors. Changes in population of specific age groups, however, are caused by these four factors plus the size of the age group at the beginning of the period. For instance, those 10-14 in 1970 will be 20-24 in 1980. If there were 14,000 10-14 year olds in 1970 and none left the state or died there would be 14,000 20-24 year olds in 1980, plus any in that age group that in-migrated. Table 8 summarizes the effects of these factors. Therefore, Table 8 data will not necessarily agree with the raw data shown in the other population tables in this report. The value of Table 8 is that it allows analysis of changes in the age groups.

What causes changes in these age groups? The population is increased by people entering the area (in-migration and births) and decreased by those leaving (out-migration and deaths). Table 8 shows that since 1930 the net increase in total population has been due to in-migration and births in the 0-9 age group. It wasn't until the 1970-1980 period that any other age groups showed an increase. During the 70's a net in-migration occurred in

the 10-14, 15-19, 25-29, 30-34, 33-39, 40-44, and 45-49 age groups: totaling 27,497 persons. Added to the increase in 0-9 years olds of 124,694 the total of in-migration and births equals 152,191. Yet, the total change in population was 92,281. Therefore, out-migration and deaths accounted for 59,910. The 30+ age groups make up most of the 59,910, as would be expected due to the higher death rate. However, the death rate for the 20-24 year olds would not be a significant factor. Yet the 20-24 years showed a decrease of 4,600 (7.6% of the total loss) which must be mostly attributed to out-migration. This group has shown a decrease since 1930. It appears that many young adults entering the 20-24 age group are leaving the state and, until the 1970's, most did not return.

LABOR FORCE

Changes in the labor force reflected population shifts, but to a much larger extent. Statewide, the labor force will expand by 46.9% in 1983 from 1970. Again the Billings SMSA exceeded this growth rate 67.6%, and the Great Falls SMSA (24.0%) was below the state's rate. In actual numbers there should be approximately 122,353 more persons in Montana's labor force in 1983 of which 103,393 will be working and 18,960 will be unemployed. The addition of 18,960 unemployed persons to Montana's labor force will strain the unemployment rate. In 1983, 9.1% of the civilian labor force is expected to be unemployed compared to 6.2% in 1970.

The unemployment rate for males in 1983 is projected at 9.5% while the rate for females is 8.6%. This is the opposite of 1970 when the rates for males and females were 5.8% and 6.8% respectively.

LABOR FORCE cont.

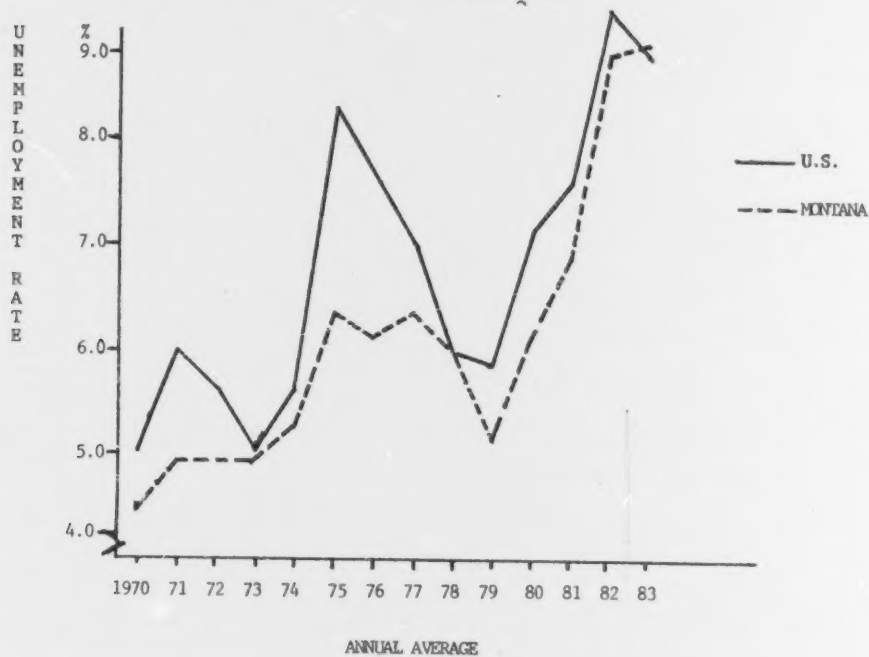

The female labor force has grown significantly since 1970. In 1970 there were 91,578 females in the labor force compared to 159,279 in 1983, a 73.9% growth. Female unemployment has increased by only 45.6% over the same period. The male labor force, on the other hand, grew 33.9% with male unemployment growing by 117.4% from 1970-1983. This shift in the labor force dynamics does not necessarily indicate a long term trend, but does deserve a watchful eye in the future to see if a long term trend develops.

Montana's non-white labor force expanded 137.0% since 1970 with non-white unemployment jumping 331.1%. Here again, the percentage increase in the labor force of non-white males was less than the increase of non-white females (135.1% and 140.3% respectively) but the increase in unemployment was reversed (351.1% non-white males and 278.0% non-white females). Non-white males are expected to experience 34.2% unemployment in 1983; non-white females 26.3%.

Montana's growing labor force is the result not only of an expanding population, but of increasing labor force participation rates. This trend is not isolated to any specific area of the state or to any particular sex or race. The more pronounced changes in participation rates are for females. In 1970, 38.5% of those females age 16 years and over were employed or looking for work. Compared to 53.3% forecast for 1983. Statewide, the participation rate for all persons should climb to 65.4% in 1983 compared to 56.0% in 1970. (See Table 15.)

INDUSTRY EMPLOYMENT 1985

The forecast employment in 1985 of 417,482 represents a thirty-two percent increase in the number of jobs over the 1976 employment figure of 314,841. To facilitate accurate forecasting and comparison it is necessary to classify industries by service or goods producing. Goods producing deals with goods produced for consumption and includes the following major divisions: agriculture, mining, manufacturing, and contract construction. Service producing include the major divisions of: trade, services, government, transportation, communications and public utilities, and finance, insurance and real estate.

By 1985, both goods and service producing industries will grow by substantial amounts, twenty-four percent for goods and thirty-six percent for service. The service segment will be approximately two and one-half times larger than the goods producing. Although Montana is considered a resource state, most Montana jobs are in the service area. The growth in goods producing jobs should cause a larger growth in service jobs due to the increased demand for services created by those employed in goods producing.

AGRICULTURE, FORESTRY, AND FISHERIES

Agricultural employment shows little growth but indicates a leveling-off of the decline experienced in the sixties. This area remains Montana's largest export industry and provided employment for 39,754 in 1976 and projected 39,838 in 1985. Opportunities for employment will be replacement rather than expansion related. Environmental decisions will to some degree effect opportunities in the forestry and fishery areas, but no substantial growth is expected.

MINING

Development of Montana's coal, gas, and oil resources will add a significant number of jobs. While the 'boom' era of the last few years seems to have subsided, a more orderly development of energy sources will continue. Some aspects of the metal mining industry have experienced a slowdown but the demand for gold, silver and other rare metals found here is increasing. Mining will thus continue to be very important to the State's economy in the future. Employment levels in 1976 were estimated at 6,630 and showed a significant increase of sixty-two percent to 10,710 by 1985.

CONTRACT CONSTRUCTION

Energy related large scale projects such as Colstrip #3 and #4 will keep providing opportunities for construction workers. The demand for new homes, while currently being held back by high costs, is still there and will increase as the population increases. While employment in this area is subject to extreme fluctuation both economic and seasonal in nature, it is projected to be 34,722 by 1985, a fifty percent increase over the 1976 figure of 23,136.

MANUFACTURING

Manufacturing represents a small percent of total employment and shows a moderate growth at twenty-two percent from 1976 to 1985. The majority of manufacturing employment is in lumber and woods, food products, and primary metals. The thirty-one percent growth in lumber and woods can be directly related to demand for housing. Foreign competition will still affect primary metals but it will show some gains over 1976 figures.

Durable goods will account for 20,489 and non-durable 9,922 by 1985.

TRANSPORTATION, COMMUNICATIONS, AND PUBLIC UTILITIES

All areas in this division will experience growth during this time.

Shipment of the states mineral resources and farm products to users will increase and employment will likewise increase in some types of transportation. The sixty-nine percent increase in communications and public utilities will add about 5,800 jobs in this area. The greatest single cause can be attributed to energy development.

WHOLESALE AND RETAIL TRADE

An increase of 25,000 workers should occur in wholesale and retail trade, Montana's second largest division. Wholesale accounts for seventeen percent and will experience a twenty-eight percent increase between 1976 and 1985. Retail is eighty-three percent and will grow thirty-four percent in this time. Eating and drinking establishments, and general merchandise will employ the largest portion of this industry. Employment opportunities should remain high in this area.

FINANCE, INSURANCE, AND REAL ESTATE

This industry is influenced mostly by population and the effect of population growth is readily seen in the forty-five percent increase experienced in finance, insurance, and real estate. This will account for an increase of 5,500 new jobs.

SERVICES

Montana's largest division will provide jobs for 130,008 workers in 1985. This forty percent increase adds 37,045 jobs to the 1974 level. The industries in this sector are hotels and lodging, personal services, business services, auto repair, entertainment, medical, legal, educational, museums, nonprofit and miscellaneous services. Growth will be experienced in all segments of this division. Increased population growth and greater societal demand will be the cause for this growth.

PUBLIC ADMINISTRATION

This division accounts for only those jobs which cannot be classified in any other industrial classification. It is expected to grow twenty-seven percent to 22,625 jobs by 1985. The majority of this growth will be at the state and local level.

^{1/} Includes those workers engaged in activities unique to government.

EMPLOYMENT BY OCCUPATION: 1985

Total employment for all occupations is projected at 417,380 for 1985. This is a 32.6 percent increase over total employment for 1976. Three of the nine major occupational groups make up nearly 50 percent of the total employment. The three groups are; Professional, Technical and Kindred workers with projected employment of 62,170, Clerical workers with 62,750, and Service workers with 66,430. Three selected occupations under clerical workers are expected to grow by more than 100 percent. Medical secretaries have a projected percent change of 115.4, Teacher Aides have a 116.6% change, and miscellaneous clerk workers show projected growth of 109.3%.

Blue collar employment is projected to increase slightly by 1985. The reason for the increase in blue collar workers would be mostly due to the increase in craft and kindred workers. While blue collar workers are projected to make up 28% of the total employment, white collar workers are projected to make up 48.4% of total employment. Most selected industries under white collar employment have projected growth, with sales workers being one sector under white collar industries showing negative growth in projected employment.

Annual Average Job Openings are projected at 23,770 for the period 1976-1985. Forty-eight percent of these openings are due to growth. The other fifty-two percent are openings due to separations. Most of the growth appears in white collar employment and service workers reflecting a technically oriented economy with continued expansion in the service producing industries.

PROFESSIONAL, TECHNICAL AND KINDRED WORKERS

Projected employment in professional occupations is 62,170. This is a 34.5% increase in professional employment over the period from 1976 through 1985. Professional occupations deal with theoretical or practical aspects of such fields as science, engineering, technical work, art, education, medicine, law, and business relations. Most of these occupations require substantial education preparation, usually at the university level. Technical positions require knowledge of scientific, engineering, mathematical, computer programming, and draft design principles asquired by training through technical institutions, junior colleges, post high school courses, on-the-job training, or experience.

Selected occupations in the professional field with more than 100 annual average job openings include elementary school teachers with 735. Secondary school teachers are projected as having 264, and there are 269 job openings for registered nurses. Other occupations with over 100 job openings include clergy, accountants, and preschool teachers. The selected occupation under professional occupations with the highest projected growth rate is optometrists with 91.6% change. Some other selected occupations with high, projected growth rates include Podiatrists with an 81.4% change, preschool teachers with 79.7% change, and Urban and Regional Planners with a 73.4% projected growth rate.

MANAGERS AND OFFICIALS

Employment in this occupational group is projected to increase by 34.6% by 1985. Employment in 1976 for this group was 40,780 and could reach 54,900 in 1985. Managers and officials will make up 13.2% of Montana's total employment. This occupational group includes persons concerned with policy making, planning, organizing, staffing, directing and/or controlling activities that are common to many types of organizations as well as activities that require a knowledge of management and operation of a given organization. Employers increasingly require beginning managers to have a college degree. A bachelors degree in accounting, economics, or finance is desired by some employers. Other firms seek applicants having technical training in engineering, science, or mathematics. Still others train liberal arts graduates on the job. Advancement to a high-level management job often occurs after several years of progressively more responsible work experience.

Managers, Officials, and Proprietors will have 3,400 job openings by 1985. About 1,800 of these openings will be due to separations, while 1,600 will be openings due to growth. Administrators and top management officials should fill approximately 1,000 of the openings, while 2,400 openings will be in other manager and official selected occupations. Some selected occupations having more than 100 annual average job openings include bank and financial managers, with 232 openings by 1985, and Restaurant, Cafe and Bar Managers with 210 annual average job openings. Sales managers, administrators, school administrators and office managers were other selected occupations with projected annual average job openings of over 100.

SALES WORKERS

Sales workers will make up only 5.3% of Montana's total employment number. Sales will employ 22,140 persons compared to 16,990 in 1976. This is an increase of 30.3%. In this major occupational group, there are 1,270 projected annual average job openings. Nearly 55% of these openings are due to separations from jobs, while the other 45% are due to growth.

In this major occupational group, the occupations include those concerned with selling goods and/or services. The minimum educational requirements for sales careers vary widely. Some sales positions require no formal education, while others specify a college degree in a technical or scientific field. Even for routine sales jobs, however, a high school diploma is an asset for the beginner. Training for some jobs, such as those in retail stores, is usually received on the job. Some persons combine on-the-job training with courses offered by manufacturers or local educational institutions.

Two selected occupations in the sales area with projected annual average job openings of greater than 100 include insurance agents and real estate agents, each with projected openings of 107 and 145 respectively. A selected occupation with a negative growth rate is the newspaper carrier and vendor, having 404 employed persons in 1976 and 343 employed by 1985.

CLERICAL WORKERS

There were 44,670 clerical workers in 1976. This number is projected at 62,570 by 1985, meaning a 40.5% increase. The annual average rate of growth would be 4.5%, and projected to employ 15% of Montana's employed workers. Clerical workers include stenographers, office machine operators, typists, secretaries, and other clerical workers. The work includes preparing, transcribing, transferring, systemizing and preserving communications and records. Clerical workers are also involved in planning, coordinating or expediting production and the flow of work and workers involved in clerical work. Most clerical jobs require a high school diploma and most business courses are regarded as good qualifications.

Annual average job openings are projected at 3,780 by 1985 in clerical occupations. Over 2,000 of these openings are due to growth while the remainder of nearly 1,700 are due to separations. The greatest number of openings in selected occupations are for secretaries. These are 870 projected openings in this area. Other selected clerical occupations with over 100 openings include bookkeepers with 491 openings, cashiers with 313 and teacher aides with 211. Receptionists, counter clerks, and typists are all projected at having between 100 and 200 openings.

Medical secretaries and teacher aides have projected growth rates of over 100%. Billing clerks and meter readers both have approximately 80% projected growth rates. On the other hand, there are six selected occupations showing negative growth rates through 1985. They include stenographers, keypunch operators, mail carriers, postal clerks, telegraph operators, and enumerators and interviewers.

CRAFTS & KINDRED WORKERS

Selected occupations in this major group include, construction workers, metalworkers, mechanics, printers, and transportation and public utilities. Most of the workers learn their trades through planned apprenticeship training or through informal on-the-job training. Others learn a skilled trade in vocational trade, or technical schools. Training and experience in the armed forces may be of help in many of these jobs. A high school education and a high degree of aptitude are required by most employers. Employment of 55,740 is projected for this major occupational group in 1985, compared to 39,470 in 1976. This gives a 41.2% rate of growth over the nine year period.

Annual average job openings totaled 3,060 for crafts and kindred workers. Separations accounted for 1,250 openings, while 1,810 openings were due to growth. Of all crafts, the cement and concrete finishers are projected to have the highest growth rate with 92.7% change. Growth in these occupations is largely dependant on a turnaround in the economy particularly in the construction industry. Structural metal workers have a growth rate of 87.5%, while air conditioning workers and bulldozer operators have projected increases of over 70%. Selected occupations showing negative growth rates include, blacksmiths, typesetters, locomotive engineers, and bakers. Craft and kindred workers occupation will account for 13.4% of Montana's total employment by 1985.

OPERATIVES

Projected employment in 1985 for this major occupational group is 41,060. This is an increase of nearly 9,000 since 1976, with a growth rate of only 27.8%. This is one of the lowest growth rates for a major occupational group in this study period. Selected occupations in this major group with high growth rates include Earth Drillers, Photographic Process Workers, and Railroad Brake Operators. All three of these groups will have increased employment of over 50%.

Operatives are classified as semiskilled workers. Most of them operate some type of machinery, equipment, or tool in performing their jobs. Some of the jobs require only brief on-the-job training. Even the jobs that require a higher degree of skill can be learned in a few months. The ability to learn jobs quickly is an important qualification for semiskilled workers. This major occupational group is projected to make up nearly 10% of Montana's total employment. By 1985, projected job openings will total 1,830 in this group. Of these openings, 54% of them are due to growth, while the other 46% are due to separations from jobs. Truck drivers have over 100% more job openings than any other selected occupation in this group with 271 annual average job openings. Bus drivers have a projected decrease in employment of 15.8% by 1985.

LABORERS, EXCEPT FARM

Laborers are needed in most all nonagricultural industries. Examples of laborers include, construction laborers, freight handlers, gardeners, stock handlers, logging workers, or in assisting crafts and trades. Much of the work that laborers perform involves tasks that require little special training. Brief instruction and a few hours of on-the-job training is all that is needed for most nonfarm laborer jobs. Freight and material handlers account for more laborer's employment than any other selected occupation in this group. Stock handlers and construction laborers are two other selected occupations which, when added to freight handlers, total to over 50% of Montana's total projected employment for laborers.

Laborer, with projected employment of 20,090 is the smallest occupational group. This gives a 3.2% annual average increase. Annual average job openings are projected to total 950. Almost 53% of these openings are due to growth. In this major group, the selected occupations with greater than 100 annual average job openings by 1985 included, construction laborers, freight handlers, gardeners, and stock handlers.

SERVICE WORKERS

Service workers include selected occupations such as, cleaning services, food services, health services, personal services, and protective services. These jobs require direct contact or close association with the public. Others require contact with the public while protecting them or their property. Training and skill requirements differ greatly among the different services. Some require college education, some vocational

SERVICES WORKERS (Cont.)

training, and others require no specific educational requirements.

This major occupational group, with projected employment of 66,430, is the largest major occupation. It also has the largest projected growth rate with a 42.0% increase. This may be an indication of the continued expansion in the service industry. Annual average job openings totaled 4,580, with about 48% of them due to growth in the service industry. Two-thirds of the service employment is projected to be made up of two different selected occupations. Cleaning services and food services have employment of 1,110 and 1,810 respectively. Some selected occupations in this major group with projected high growth rates include dental assistants with a 99.5% increase, lodging quarters cleaners with a 89.0% increase, and child care workers with a projected increase of 88.3%

FARMERS & FARM WORKERS

Very little changes is projected for farmers and farm workers between 1976 and 1985. With 32,130 employed persons in 1976, projected employment for 1985 is 32,100, which is only about a 0.1% decline in employment. While the growth rate for farm managers increases, employment for farm laborers shows a negative growth rate.

JOB SERVICE TABLES

Selected statistics from the Employment Service Automated Reporting System (ESARS) appear in Tables 33-38. These tables provide some demographic characteristics of the population using the Montana Job Service in fiscal 1980 and 1981. ESARS is an administrative record and only those persons who seek services through the Job Service appear on ESARS tables.

The characteristics of this population are an indication, to some extent of the characteristics of the general unemployed population. Care should be taken, however, when applying Job Service Applicant Population Ratios to the general unemployed population. Certain sub groups of the active file population may tend to be over, or under, estimated due to their propensity to use, or not to use, the Job Service.

GLOSSARY

BENCHMARK - Most economic time series utilize a sample trend made of the best available data at the time. Periodically the series is adjusted due to more complete information being available. This periodic adjustment is a Benchmark Revision and the point-in-time for which the more complete data was available is the Benchmark Data. Data is commonly referenced by its benchmark data, e.g., "data based on a March 1976 benchmark".

CIVILIAN LABOR FORCE - The number of persons 16 years and older, defined as employed or unemployed, excluding members of the Armed Forces.

CURRENT POPULATION SURVEY - A monthly household survey of the population of the United States. The survey is the data source for the national estimates of labor force composition. CPS data is also incorporated into state and area labor force estimating procedures.

DISCOURAGED WORKER - Persons who want work but made no attempt to find work in the past 4 weeks because of a belief they could not find employment. Discouraged workers are not counted among the unemployed.

D.O.T. CODES - An occupational coding structure based upon job traits and relationships. The codes are published in the Dictionary of Occupational Titles.

EMPLOYMENT SERVICE AUTOMATED REPORTING SYSTEM (ESARS) - A computerized tally of all Job Service activities, job applicant and job opening characteristics.

HARD-TO-FILL JOB OPENINGS - Job openings which have gone unfilled for a month or more. Some of the openings may be difficult to fill because of the environment, wage scales, or lack of qualified workers.

HIGH DEMAND OCCUPATION - Occupations which have a substantial number of job openings both in absolute terms and relative to the number of job applicants for that occupations.

INDEX OR INDEX NUMBER - A measure of relative growth compared with a base figure for the same time series. In index for the base period is set equal to 100, and data for other periods are expressed as percentages of the base value.

LABOR MARKET AREA - An area with a central community and economic concentration in which workers can generally change jobs without changing their residence. In most states labor market areas are either counties or groups of counties.

S.I.C. CODES - Standard Industrial Classification code structure in which all establishments are classified by a four-digit code according to their primary economic activity.

STANDARD METROPOLITAN STATISTICAL AREA (SMSA) - SMSA's generally consist of counties or groups of contiguous counties which meet specifications of social and economic integration with a central city (or twin cities) of at least 50,000 population.

UNDEREMPLOYMENT - A term that includes both persons who are working part-time who would prefer full-time work, and persons working full-time in an occupation which does not utilize their skills derived from prior training or experience.

UNEMPLOYMENT - The number of persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).

VIETNAM ERA VETERAN (VEV) - Any person who served on active duty for a period of more than 180 days, any part of which occurred between August 5, 1964, and May 7, 1975, and was discharged or released with other than a dishonorable discharge; or was discharged or released from active duty for a service connected disability if any part of such duty was performed these dates.

WORK INCENTIVE PROGRAM (WIN) - Counseling, training, job development and supportive services are provided to employable recipients of Aid-to-Families-with Dependent-Children (AFDC). The object is to place AFDC recipients into suitable employment.

Introduction

Abstract	This report is a one-page profile of selected data from Summary Tape File 1 (STF1) of the 1980 Census of Population and Housing for various government units and census designated areas. STF1 summarizes only complete-count (100-percent) data items, i.e., responses to questions that were in the short form distributed to the entire United States population. Data items include age, sex, race, Hispanic origin, marital status, household type and household relationship. Housing items include information on occupancy status, tenure, vacancy rate, contract rent, value, number of condominiums, and plumbing facilities.
Geographic coverage	Areas covered by report 1A include: - The United States - State or State equivalent - Standard Metropolitan Statistical Area (SMSA) - County or County equivalent - Places with population of 2,500 or more - Comprehensive Employment and Training Act (CETA) Prime Sponsor Areas
Race/Hispanic origin	Census data on race and Hispanic origin were obtained through self-identification. The five major racial groups shown are White, Black, Native American, Asian and Pacific Islander, and Remaining Races. In this report, Remaining Races is defined as Total less White, Black, Native American, and Asian and Pacific Islander. Persons of Hispanic origin may be of any race.
Symbols used in tables	Numbers shown in parentheses to the right of column or row labels refer to footnotes on page T-1, which are drawn from the Census Bureau's "Technical Documentation" cited below. Footnote numbers in the report table follow the same numbering as that publication. A dash "-" represents zero or a percent which rounds to less than 0.1. The three dot symbol "..." indicates data suppressed by the Census Bureau. An asterisk "*" following a value means that data suppression occurred in one or more of the census items used in calculating the report item. Use of items marked with an asterisk may be misleading without additional information. See the "Technical Notes" at the end of this report for further explanation.
Sources	Census of Population and Housing, 1980: Summary Tape File 1A (machine-readable data file) / prepared by the Bureau of the Census. Washington : The Bureau (producer and distributor), 1981. Census of Population and Housing, 1980: Summary Tape File 1 Technical Documentation / prepared by the Data User Services Division, Bureau of the Census. Washington : The Bureau, 1981.
Note	Counts of the population by race and Hispanic origin in Summary Tape File 1 are provisional. Final counts will be determined after the sample data have been processed.

Technical Notes
Footnotes

These brief technical notes provide footnotes for the tables in this report, summarize the special characteristics and limitations of census data, explain special terms and data items specific to this report series, and cite references to more technical and detailed discussion of 1980 Census data topics. They are organized as follows:

1. Footnotes to items in this report
2. Data characteristics and limitations
3. Geographic area definitions
4. Item definitions and derivations.

The two major reference publications which users of these data may wish to consult and which are cited throughout these notes are the "Census of Population and Housing, 1980: Users' Guide" (cited below simply as the 1980 Census "Users' Guide"), and the "Census of Population and Housing, 1980: Summary Tape File 1 Technical Documentation" (cited below as "STF1 Technical Documentation"). The "Users' Guide" provides general information about the census, how data were collected, what questions were asked, etc., and provides an excellent overview of available publications, data, and services. The "STF1 Technical Documentation" provides detailed information about the specific computer tapes that were used to produce this report. Both publications are available in many libraries and may be ordered from the following source:

Data User Services Division
Data Access and Use Staff
Bureau of the Census
Washington, DC 20233
telephone: (301) 763-2074

Footnotes

This section contains footnote material from the "STF1 Technical Documentation" which pertains to specific items in this report. Footnote numbers shown below and in the report tables are those defined in that publication; footnotes which do not pertain to items in this report have been omitted.

Footnote (1)

The count of households in the complete-count tabulations by definition equals the number of occupied housing units. For this documentation the term "Household" is used unless the matrix is stratified by a housing item such as tenure, plumbing facilities, etc., in which case the term "occupied housing unit" is used.

Footnote (2)

This tabulation includes vacant seasonal and migratory units. Vacant seasonal and migratory units are excluded from all other tabulations.

Footnote (3)

For data tabulated on a 100-percent basis, "Remaining Races" includes all persons in the self-designated category "Other."

Footnote (4)

"Asian and Pacific Islander" in the 100-percent tabulations includes "Japanese," "Chinese," "Filipino," "Korean," "Asian Indian," "Vietnamese," "Hawaiian," "Guamanian," and "Samoan."

Footnote (7)

Tabulations of "Persons in household" based on 100-percent data by definition are the same as tabulations of "Persons in unit." The phrase "Persons in household" is used unless the matrix is stratified by a housing item such as tenure, plumbing facilities, etc., in which case the phrase "Persons in unit" is used. Tabulations of "Persons in household" and "Persons in unit" based on sample data are not necessarily the same because of differences in the procedures used to inflate sample population and housing data.

Footnote (11)

Value and price asked are tabulated separately for non-condominium and condominium units. The non-condominium value distribution is restricted to certain kinds of "owner-occupied" units; the non-condominium price asked distribution is restricted to certain kinds of "vacant-for-sale only" units. The following are excluded from the tabulations on value and price asked for non-condominium units:

- a. Units at an address with two or more units
- b. Units on 10 or more acres
- c. Units with a commercial establishment or medical office on the property
- d. Mobile homes or trailers

The condominium value distribution is tabulated for all "owner-occupied" condominium units; the condominium price asked distribution is tabulated for all "vacant-for-sale only" condominium units.

Footnote (13)

Lacking complete plumbing (facilities) for exclusive use includes: Complete plumbing (facilities) but also used by another household, some but not all plumbing facilities, or no plumbing facilities.

Technical Notes (continued)
Data Characteristics and Limitations

=====

Data Characteristics and Limitations

=====

These reports are intended to simplify use of census information, but users still need to be aware of data characteristics, definitions, and limitations. Users who do not check the definitions of census terms or who do not understand the concept of "universe" often misinterpret census data. For example, they may mistake family income for household income, may misinterpret the term "unemployed," or may not consider which type of buildings are included in the "occupied housing units" universe. It is also important to understand the limitations of census data, including both sampling and non-sampling errors. This section, which summarizes a lengthier discussion from chapter 6 of the 1980 Census "Users' Guide," addresses questions that should concern every data user.

Universes for Tabulation Items

Each tabulation in census materials and this report is an aggregate summary based on a particular "universe" of individual persons, families, households, or housing units to which data pertain. Indented row labels such as "Hispanic by Race" identify subsets of the universes identified at the top of each part of the table. Universe is thus crucial to interpretation of each table, and data based on different universes usually cannot be combined.

Complete Count and Sample Data

There were two types of 1980 census questionnaires: the short form and the long form. About 81 percent of households completed the short form, which contained seven questions about each household member, nine questions about the housing unit, and three questions to ensure that no person associated with the household was overlooked. Data derived from these questions are referred to as 100-percent or complete-count data.

A scientific sample of about 19 percent of all households nationwide completed the long form, which contained all the questions on the short form plus additional questions on 26 population and 20 housing subjects. Sampling allowed the Census Bureau to collect information on additional subjects while minimizing the overall reporting burden.

Short-form or 100-percent data are more precise, but more limited than sample data. In addition, the 100-percent or complete-count data are processed first and are, therefore, available sooner.

All of the data in this report were drawn from the first Summary Tape File released by the Census Bureau, STF1, which contains aggregate summary tabulations from complete-count or short-form 1980 Census data.

Errors

The complete count data in this report are not subject to sampling error, but may contain occasional non-sampling errors due to human and mechanical failures that inevitably occur during the course of any large-scale data collection operation such as the decennial census. Such errors include failure to enumerate every household or person in the population, not obtaining all required information from respondents, obtaining incorrect or inconsistent information, and recording information incorrectly. Errors can also occur during the field review of the enumerators' work, the clerical handling of the census questionnaires, or the electronic processing of the questionnaires. Chapter 6 of the 1980 Census "Users' Guide" cited above discusses in some detail the various types of errors that could have occurred and the quality control measures that were employed in order to minimize such errors.

As with the 1950, 1960, and 1970 censuses, there were programs at the conclusion of the 1980 census to measure various aspects of the quality achieved, including the degree of completeness of the count of persons and housing units. Although evaluation programs for the

1980 census were not completed at the time STF1 was released, preliminary estimates indicate that the rate of undercoverage in the 1980 census was reduced from 1970 undercoverage, which was estimated to be about 2.5 percent of the population.

Editing, Allocation, and Substitution

In order to produce statistics that describe the population as accurately and clearly as possible, the Census Bureau employed a variety of techniques which are described in chapters 2 and 6 of the 1980 Census "Users' Guide." After data were collected, certain unacceptable entries and blank items were edited, by machine whenever possible, and by hand when necessary.

Whenever inconsistent or blank items occurred, the Census Bureau assigned or substituted information rather than simply reporting the items as "missing." This process is called "substitution" when it involves all information for an individual or housing unit, and "allocation" when only a portion of the data items were involved. The editing process ensures that the distribution of characteristics for persons and housing units assigned by the computer corresponds closely to the distribution of characteristics for persons and housing units actually reported in the census. Specific tolerances were established for the number of computer allocations and substitutions permitted. If the number of corrections was beyond tolerance, the questionnaires in which the errors occurred were clerically reviewed. STF1 includes four tables (56, 57, 58, 59) that allow users to determine the extent of allocation and substitution for a given geographic area, but that information is not given in this report because of limitations of space and because the proportion of allocation and substitution was normally very small for areas covered by this report.

Data Item Suppression

In order to maintain the confidentiality promised to respondents and required by law, it is necessary for the Census Bureau to make sure that its public data do not disclose information about any individual. Therefore, the Bureau suppresses tabulations of characteristics of very small groups of people or housing units. The final section of chapter 6 in the 1980 Census "Users' Guide" details the rules for suppression of 100-percent data, with examples of different types of suppression and discussion of the consequences of ignoring suppression in calculations.

Several basic counts are never suppressed, even if there is a count of only one. They are as follows:

- Total population
- Total housing units
- Year-round housing units
- Occupied units
- Vacant year-round housing units
- Count of persons and households in each race or Hispanic origin group

Characteristics of persons other than race or Hispanic origin (e.g., age, relationship) are shown only if there are 15 or more persons in the geographic area.

Characteristics of year-round housing units which are not classified by occupancy status (e.g., number of rooms, plumbing facilities, etc.) are suppressed only when there are fewer than five year-round housing units in the geographic area being tabulated, regardless of the number of occupied housing units or number of persons. Characteristics of families, households, or occupied units are shown if there are at least five occupied housing units within the geographic area tabulated.

In some cases complementary suppression is applied to prevent the derivation of suppressed data by subtraction. For example, distributions of data for owners or renters are shown only when the number of owners is at least five and the number of renters is also at least five.

The population and housing suppression criteria are applied independently of each other. The 15-person or five-household criteria are also applied to each race or Hispanic origin category for items tabulated by race. Individual cells of data for specific race or Hispanic origin groups are never suppressed when there are 15 or more persons of that group in a geographic area unless required by complementary suppression.

In this report series, the three dot symbol "..." indicates data suppressed by the Census Bureau. An asterisk "*" following a value means that a data suppression occurred in one or more of the census items used in calculating the report item. For advice on the consequences of ignoring suppression for items marked with an asterisk, see the relevant section at the end of chapter 6 of the 1980 Census "Users' Guide."

Geographic Area Definitions

The Report 1A series provides data for major government and census geographic areas. For a detailed discussion of census geographic areas, including hierarchical relationships, historical comparability, and availability of maps, see chapter 4 of the 1980 Census "Users' Guide" plus Part I and Appendix A of the "STF1 Technical Documentation."

In addition, Report 1A includes data for "Prime Sponsor Areas" defined by the U.S. Department of Labor, based on aggregations from smaller units provided by the census. A Prime Sponsor Area (PSA) is a large population nucleus and nearby communities which have a high degree of economic and social integration with that nucleus. Each PSA consists of one or more counties (or county equivalents); single cities or groups of cities (towns in New England); or balance of county or state portions.

Data Item Definitions and Derivations

Labels for Report 1A have in most cases been taken directly from STF1 labels used by the Census Bureau. For more precise definition of these terms plus explanation of how STF1 tabulations were derived from the original census questionnaires, discussion of the limitations of particular data items, and information about comparability with historical items from previous censuses, see the "STF1 Technical Documentation" Glossary. For a more general and comprehensive treatment of definitions, limitations, and historical comparability for individual data items, see the 1980 Census "Users' Guide" Glossary.

The table below identifies the specific census table cells and computations used to produce this report. Each row item in the table corresponds to a row label in the report. To the right of each item label are algebraic expressions for the count (N) and percentage (%) for each data item. (Except for values set to 100 percent, the algebraic expressions shown under "Percentage Calculation" give a fraction which varies from 0 to 1; for a percentage which varies from 0 to 100, multiply times 100.) In cases where this report uses a term that differs substantially from that used by the Census Bureau, the latter is given in parentheses below the row label that appears in the report.

In many cases, numeric values were taken directly from single cells of Summary Tape File 1, which are identified by tabulation number and subscript (e.g., tab12(2,5)), as in the "Summary Tape File 1 Technical Documentation." In cases where values were calculated using more than one census data item, standard algebraic notation is used: a plus symbol "+" for simple addition, plus symbols separated by three dots "...+" for sequential multiple addition, a dash "-" for subtraction, a slash "/" for division, and an asterisk "*" for multiplication. Parentheses "()" are used to specify subscripts and order of operations, if ambiguous.
